Introduction

Don't be alarmed if you're a little confused by the term "Paleo." It's short for Paleolithic, the era of the caveman, which is why the Paleo Diet is also called the Caveman Diet or the Stone Age Diet.

Hunter-gatherers from that time period ate from the land—nothing processed. That means their diets did *not* include grains, salt, refined sugar, processed oils or dairy products.

Our diets in *Old School, New Body* are very close to Paleo; however, we do include dairy. We believe that if it's organic dairy, the health benefits outweigh any negatives—and the protein dairy contains is top notch. Studies even show that dairy can increase fat loss, a subject we discuss in *OSNB*.

So what does a true Paleo diet include? Vegetables, fruits and roots, of course. As for protein, which builds muscle and every cell of the body, that macronutrient is a staple in just about every meal—just as it is in the OSNB nutrition plan. Paleo protein comes primarily from grass-fed beef, free-range fowl, fish and nuts. As we said, we add organic dairy.

One other change: Many of the modern-day Paleo diets are low carb—as low as 20 percent from carbohydrates. In our opinion,

that's not a practical or healthy version, at least for a *long-term* eating plan. The brain uses glucose from carbohydrates to function properly, and so do your muscles.

While the body can convert excess protein to glucose, called gluconeogenesis, it's not very efficient. Plus, there are residual toxins from that conversion process. In our opinion, it's better to get a mix of healthy protein and carbs.

The OSNB eating plan emphasizes some protein at every meal; however, we also call for a balance of carbs at most meals, tapering off as the day progresses if fat-loss is your goal.

You'll find that most of the recipes in this e-book contain protein. Those that don't, such as many of the snacks and soups, may require you to add some form of protein, such as nuts or cheese.

For example, many of the soup recipes do not include protein like chicken or fish. In that case we often eat a stick of string cheese on the side or even have a small glass of milk in order to get 10 to 20 grams of protein along with the carbs.

If you neglect to get protein at a meal, it's not a crime; you haven't blown your diet. Just make sure to get some protein at *most* of your meals.

We know you'll find the recipes in this e-book a convenient way to make your OSNB eating plan more interesting and healthy. Some

may become staples in your diet once you try a few. We have our delicious favorites and so will you. Enjoy.
